We have seen that an important principle in economics is the problem of maximizing profit. A second general principle involves the relationship between the marginal cost and the average cost  $A(q) = C(q)/Q$ ;  $Q > 0$ : That is, the average cost is the cost per unit of producing a certain quantity.

Find the displacement, average velocity, and average speed ... Graph for this motion is shown in the figure. Because the position of the particle is given by a mathematical function, the motion of the particle is completely known, unlike that of the car in Example 2.1. Notice that the particle moves in the negative  $x$  direction for the first second of motion, is momentarily at rest at the moment
